This file is the input for the sample PDF on the documentation site. It holds four diagrams of increasing width, and each one is wide enough to need the next rung of the page ladder. Nothing else about the document changes, so the page sizes in the PDF come from the diagrams alone.

A diagram that fits the text column

A short flow stays inline, on the body page, beside the prose that explains it.

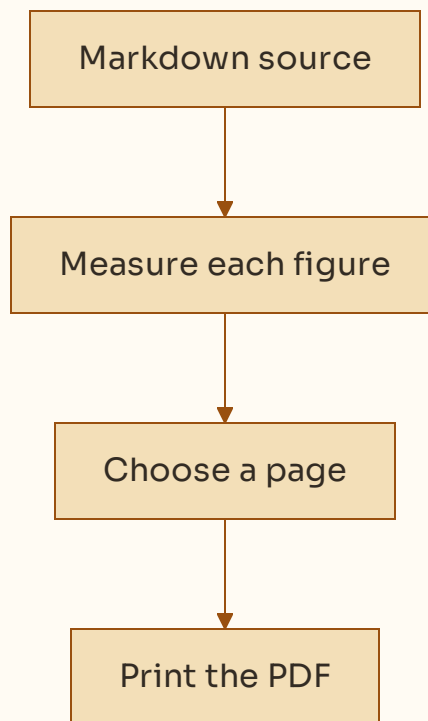

Figure 1 · A diagram that fits the text column

The rest of this section is ordinary body text. Soft line breaks are kept, so this sentence and the one before it stay on separate lines, the way they were typed.

A diagram that needs a landscape plate

Three stages with long labels are too wide for the text column at 80%, so the diagram moves to a Letter landscape plate on the next page.

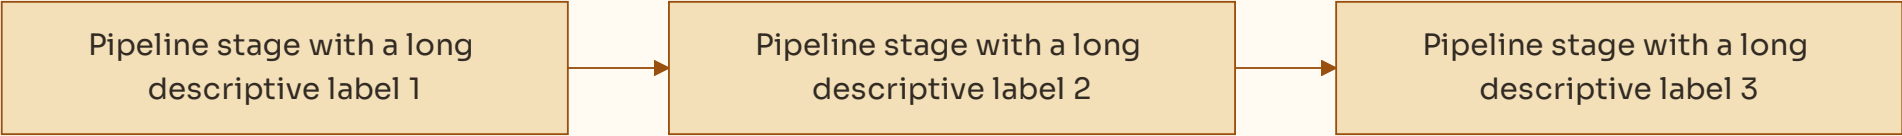

Figure 2 · A diagram that needs a landscape plate

A diagram that needs an A3 plate

Four stages no longer fit Letter landscape at 85%, so the next rung is an A3 landscape plate.

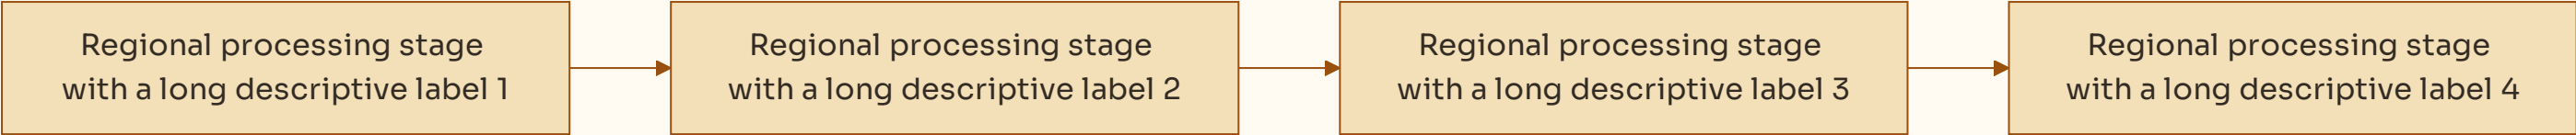

Figure 3 · A diagram that needs an A3 plate

A diagram that needs its own page size

Seven stages are wider than A3 can hold at 85%. The last rung cuts a page to the diagram's own proportions.

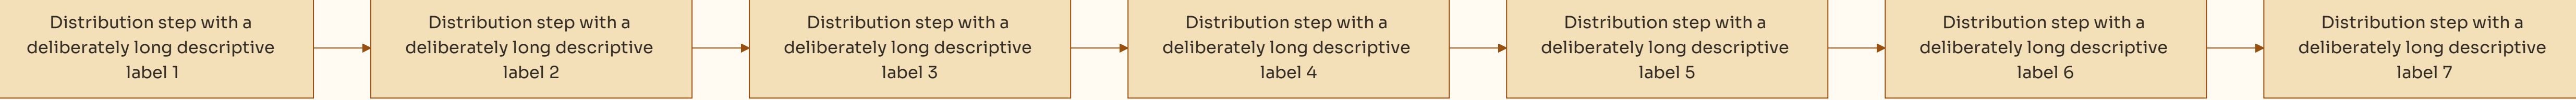

Figure 4 · A diagram that needs its own page size

A table and some code

Rung	Page	Accepted when
Inline	Body page	The figure keeps at least 80% of its size
Plate	Letter landscape, then A3 landscape	At least 85%
Custom	Cut to the figure, up to 900 mm wide	Nothing smaller holds it at 85%
